

GARI

ENTERPRISE

universal synaptic engine

GARI predicts commodity prices – very accurately.

**TODAY – EVERY DECISION
COMES AT HIGHER RISK & HIGHER COST**

**Rising input costs &
volatile commodity
prices**

**Volatile and
unpredictable
demand**

**Supply chain fragility
& geopolitical risks**

**Weakening
macro-economic
environment**

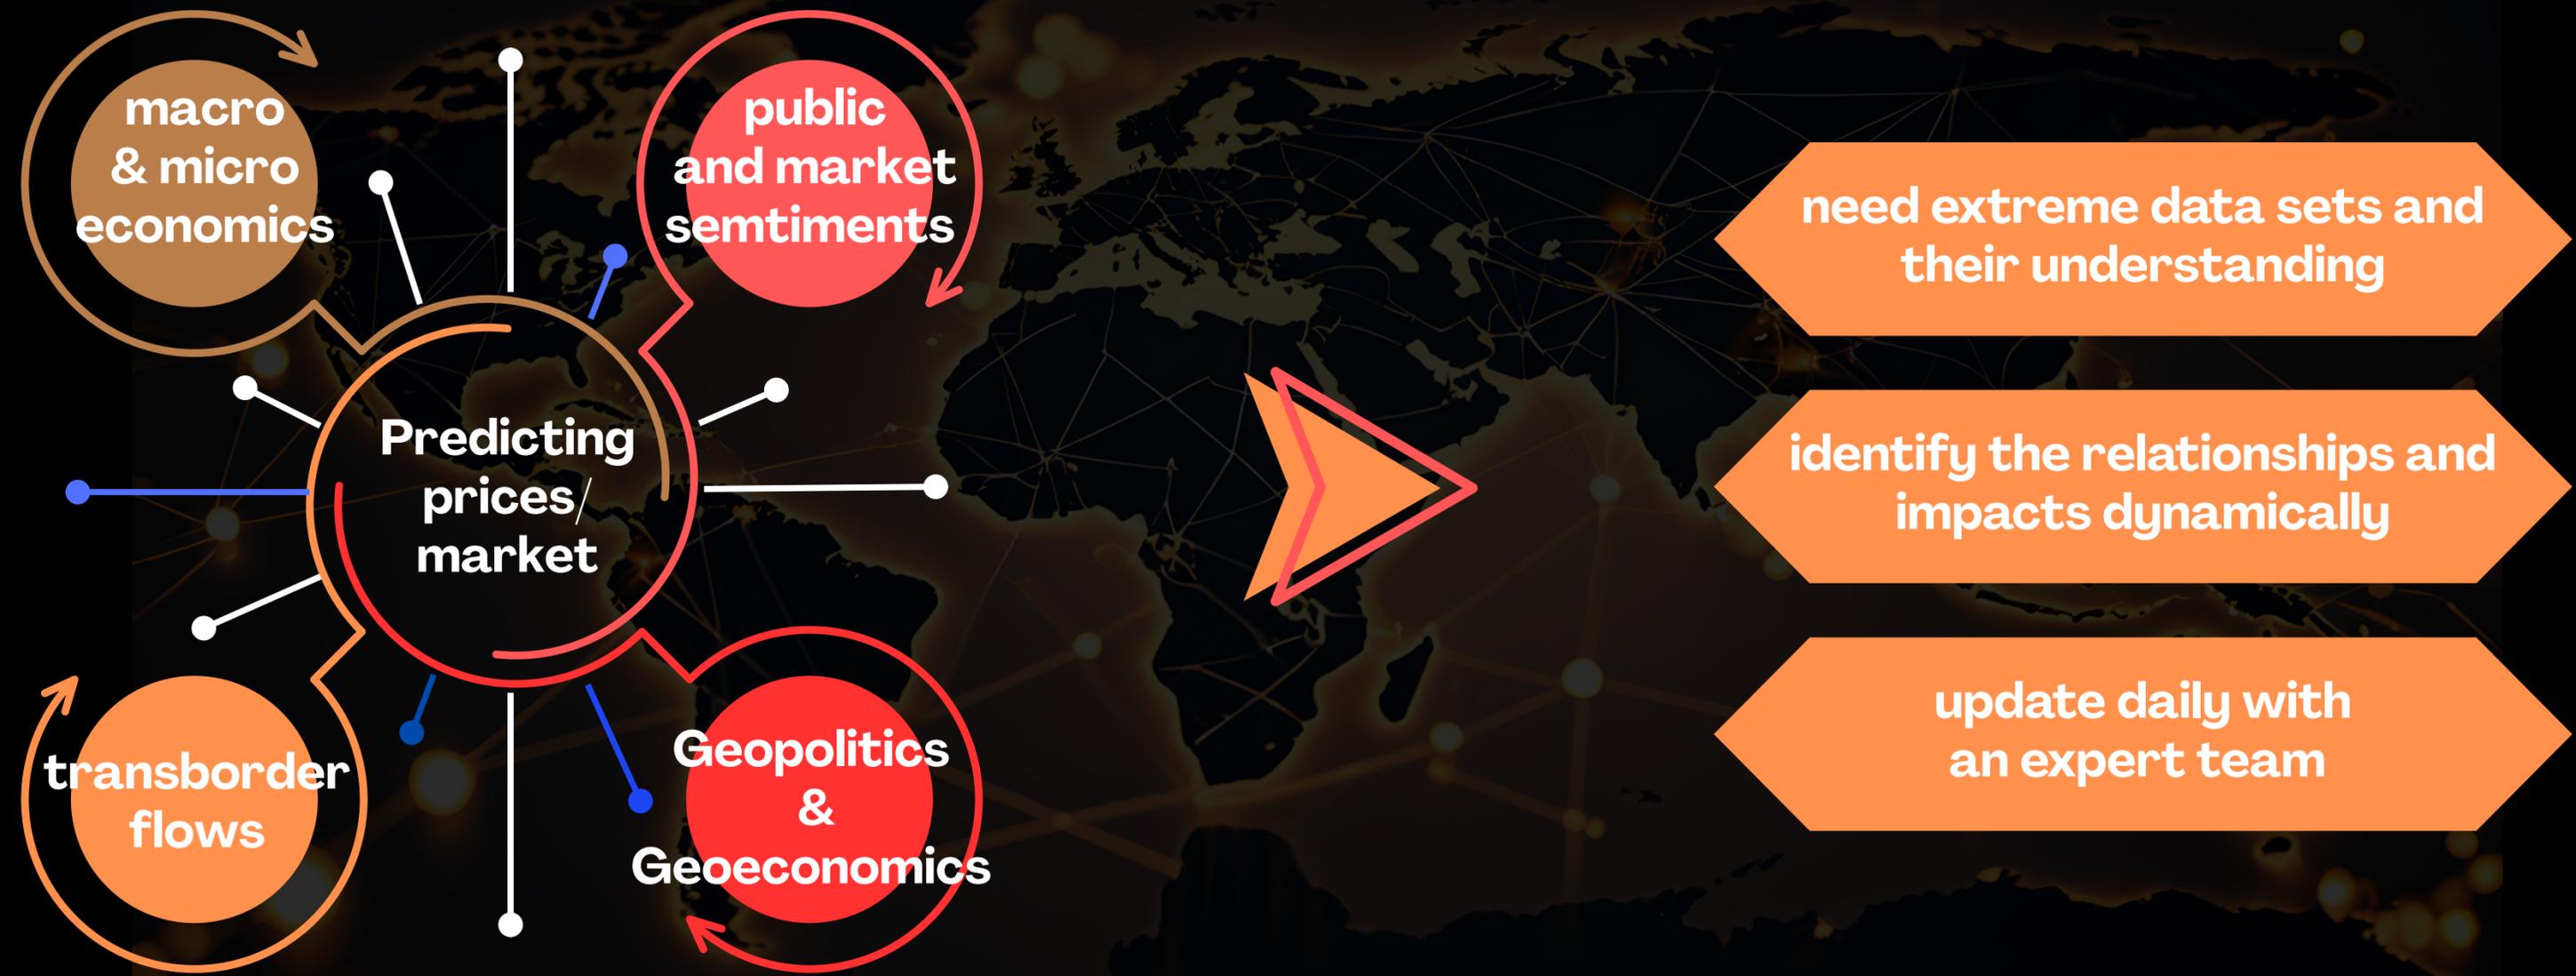

**Are you buying the
right volume?**

**Are you buying at the
right time?**

**Where to invest in the
next few years?**

UNDERSTANDING THE MARKET IS COSTLY & HARD TO DO

one needs hundreds of thousands of inputs

Generic tools are helpful, but it's challenging to make complex decisions based on them, and developing more realistic alternatives costs a lot of time and money.

CROSS-SECTORAL LENS ON YOUR MARKET WITH PLUG & PLAY SOLUTION

GARI

**GARI - a Neural Networks with
over 16 Billions Data Points
Interacting with Each Other
& updating using AI
to calculate & predict insights

Buying with GARI's Lens
SAVES/EARNS our clients
€2 M EUR

THE CHALLENGE

- Needed foresight for **resin price volatility** in flexible packaging
- Procurement teams lacked early signals → stock decisions were reactive and costly

OUR SERVICE

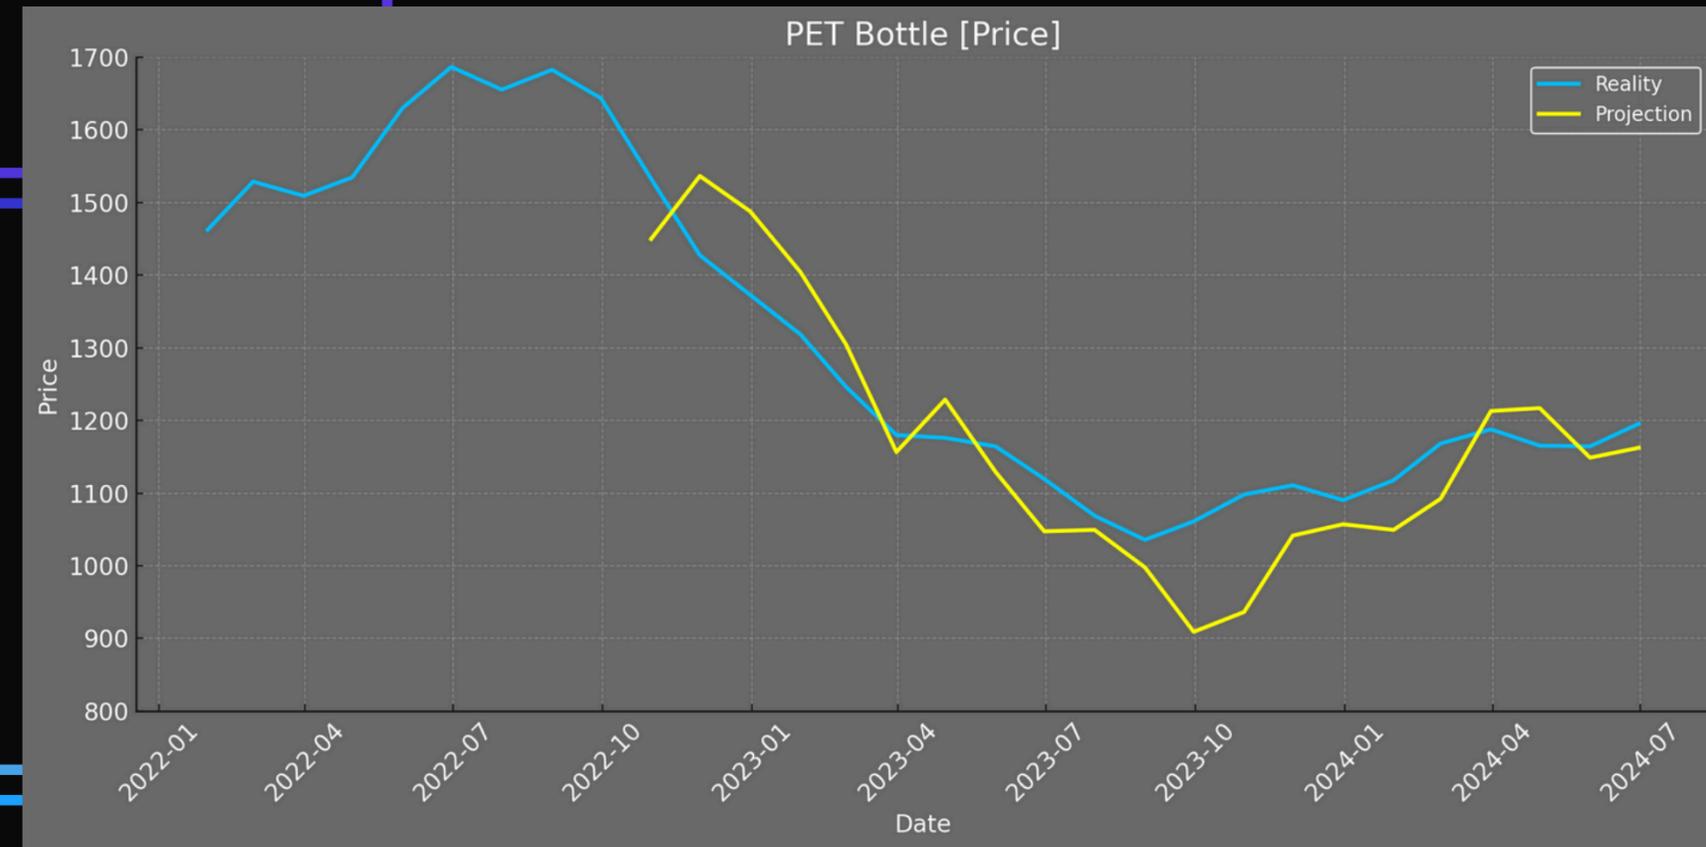

- Deployed **CPI price projections** (18-month horizon)
- Integrated into their **monthly procurement process**
- Delivered **real-time dashboard** with buy-window recommendations

THE RESULT

- More confident stock purchasing decisions
- Avoided major cost increases during volatile periods
- COVERIS estimates **€1–2M annual savings** from GARI forecasts

case study – €2m saved

COVERISTM

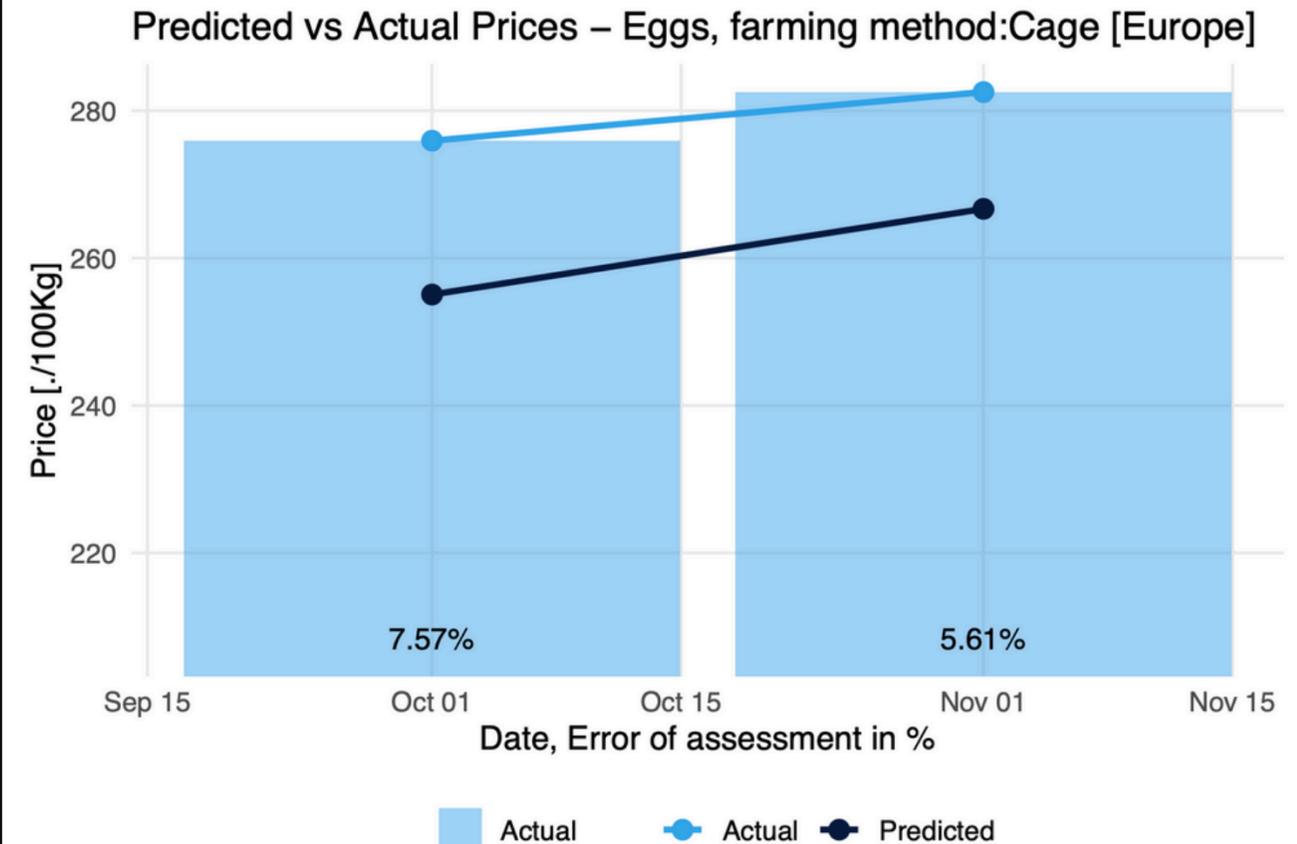

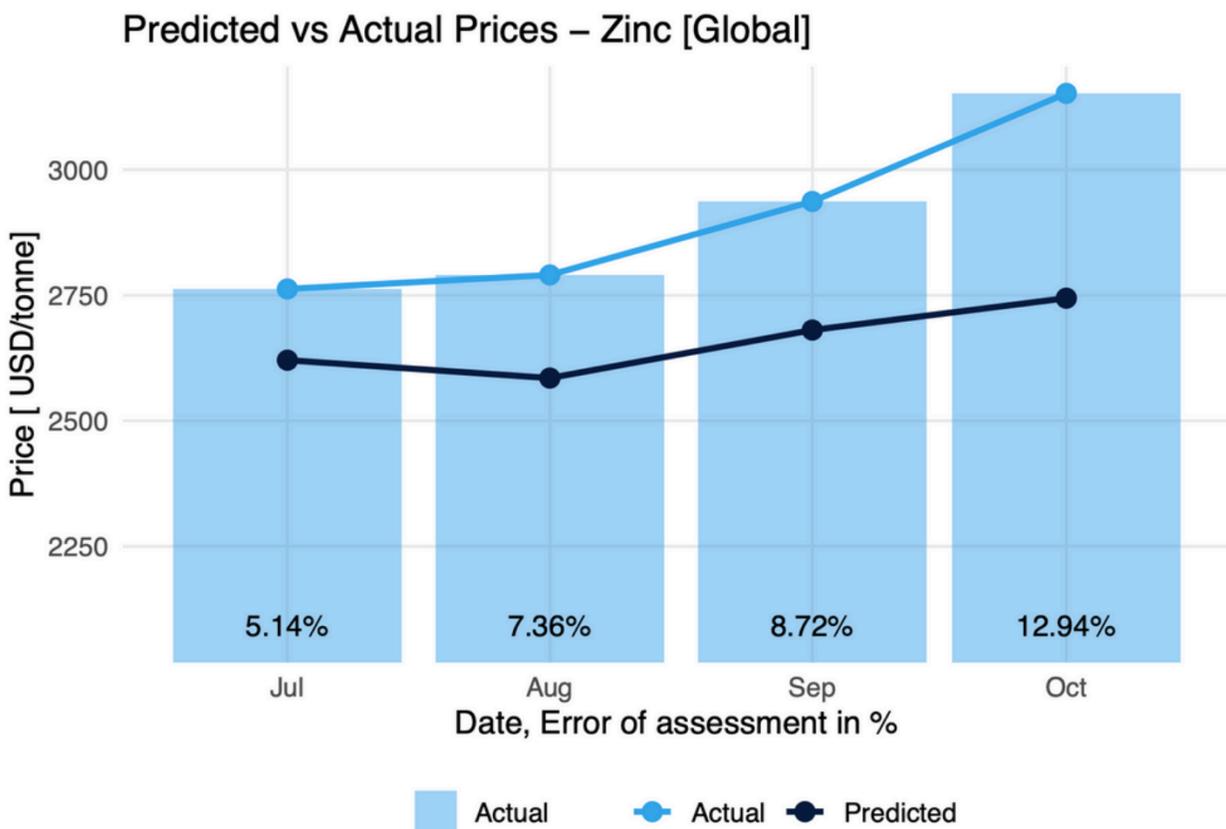

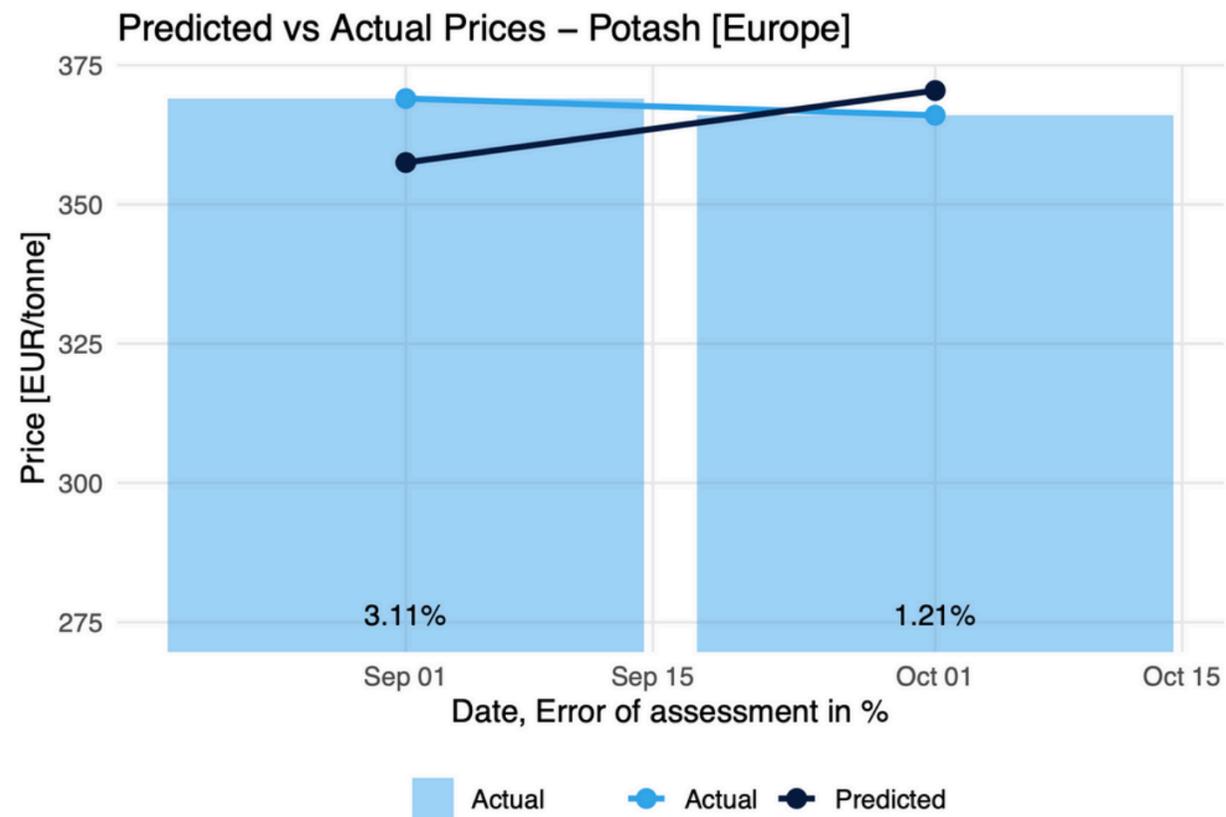

Above – GARI prediction for COVERIS on PET bottle prices for next 18 months

- The blue line is observed – reality
- The yellow line was our prediction
- GARI saved COVERIS €2m

ACCURACY REPORT

Preliminary Performance Assessment (November 2025)

In September 2025, we ran a full cycle of all CPI prediction models and then paused further updates to allow for an unbiased early evaluation of their accuracy. Because each commodity had a different last-known data point at that moment, the prediction horizon for each model begins at a slightly different date. The charts below show the early performance of three selected commodities, illustrating how CPI tracks real-world movements over time.

GARI predictions' deviation from reality:

Potash: 1-3%

Zinc: 5-13%

Eggs: 5-9%

Phosphorus: 1-6%

Nitrogen: 0-1%

Iron Ore: 10-20%

Copper: 3-14%

Aluminium: 4-12%

Coffee: 1-2%

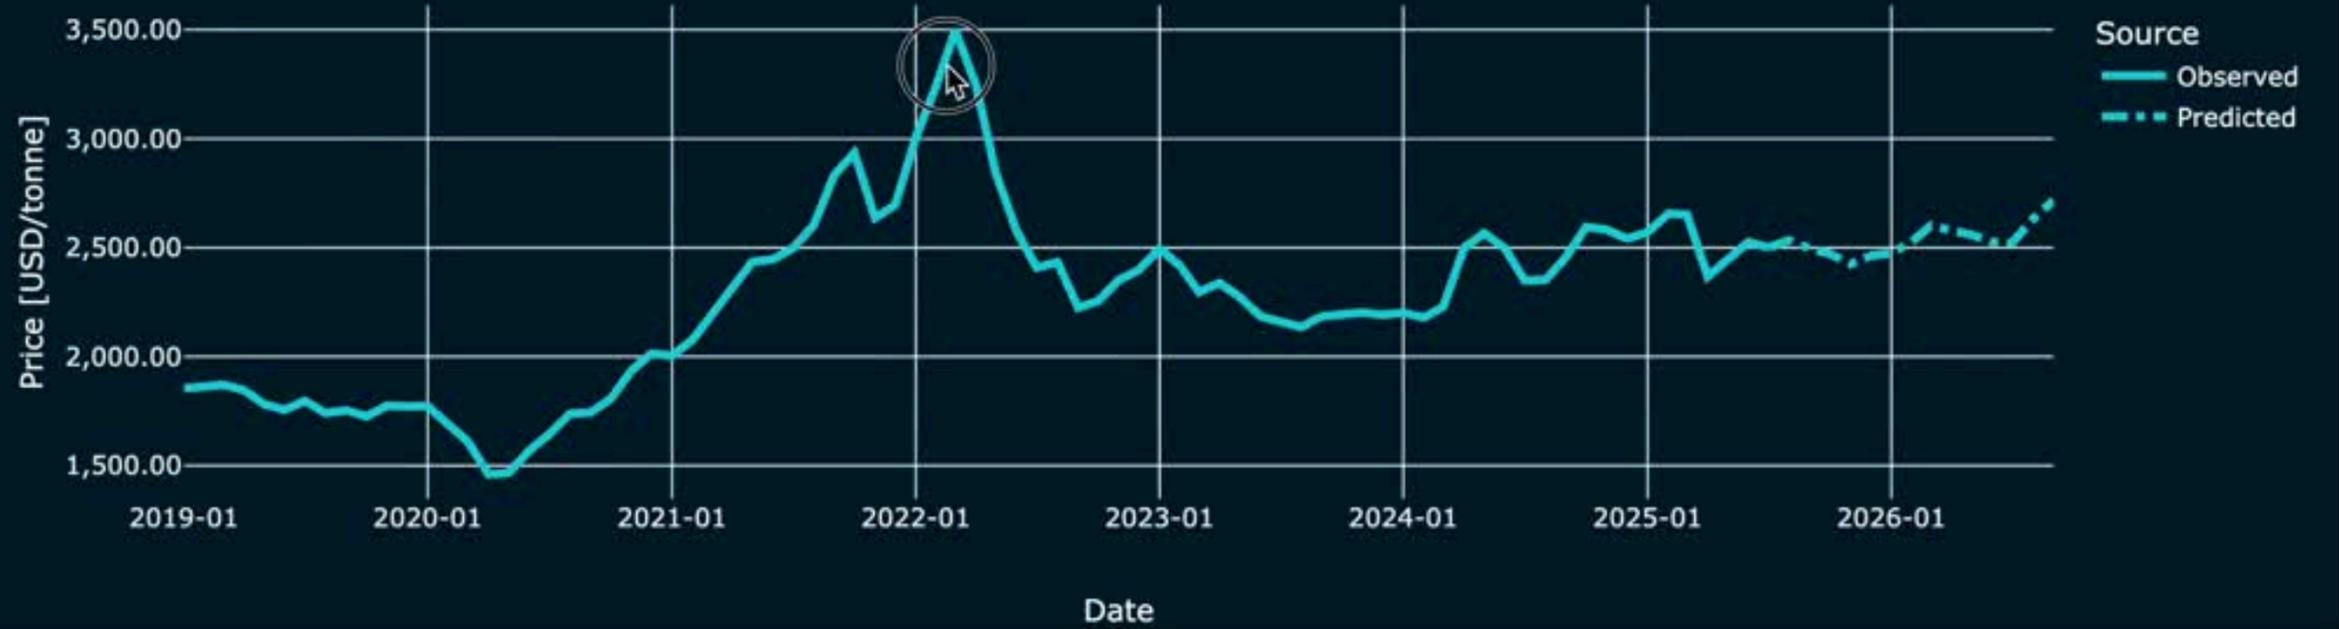

Industrial Metals

Aluminium [Global]
Copper [Global]
Iron Ore [Global]
Zinc [Global]

Agri-Food Products

Fertilisers

Aluminium [Global]

COFFEE (COVID PERIOD)

THE CHALLENGE

- **COVID created uncertainty in coffee supply** — producers had **no reliable signal**.
- Risk of overpaying or under-stocking.

OUR SERVICE

- GARI simulated agriculture, exchange rate, trade, and climate data.
- **We revealed a major and seemingly implausible spike in prices**

THE RESULT

- Producers could adjust procurement accordingly.
- Forecast was accurate — the spike materialized.
- **Millions in potential losses were avoided.**

GOV SANCTIONS ON RUSSIA

- German government had **18 hours** to decide sanction levels.
- Needed to know how different options would affect **European trade and economy.**

- GARI provided complex data for simulating the impact of multiple sanction scenarios.
- Delivered a full data-driven insight in **12 hours**

- German parliament could make a **data-backed, informed decision.**
- Understood clearly how sanctions would impact and **hurt EU economies.**

**THE
CHALLENGE**

**OUR
SERVICE**

**THE
RESULT**

- EU institutions and central banks saw **low inflation risk**.
- Forecasts dismissed the possibility of rapid price growth in Europe.

- **GARI predicted double-digit EU inflation 4 – 6 months ahead** of central banks.

- **Inflation surged exactly as GARI predicted.**

**THE
CHALLENGE**

**OUR
SERVICE**

**THE
RESULT**

INFLATION

- In early 2025, Global energy markets continued to be volatile and unpredictable.
- Most forecasts failed to anticipate a sharp downturn.

- GARI simulated global trade, demand, and supply dynamics.
- **Predicted a dramatic drop in oil prices ahead of the market.**

- Clients could prepare for the downturn in advance.
- Protected margins and adjusted strategies while others were caught off guard.

LENS CORE-PRO-MASTER-ENTERPRISE

Commodity Price Projections

Real time projections of commodity prices.
Times buys & hedges; cuts COGS volatility

DemandLens

outside-in demand forecasting; reduces inventory while lifting service.

Supply Risk Radar

fused early warning across trade, transport, geopolitical, & cyber/ hybrid disruptions.
turns alerts into actions

StrategyForge

scenario & decision workspace; turns signals into staged CAPEX, pricing, & portfolio moves.

MARKET LENS FEATURES

ENTERPRISE 360

Advanced Strategic Forecasting

— captures “advanced forecasting” + embeds the required “strategic”.

Strategic Insight & Scenarios

Structured scenarios revealing risks, opportunities, and decision pathways.

Systems-level Analysis

Global interactions across markets, policies, and supply-chain dynamics.

Enterprise-Grade Support & Integration

Dedicated workflows, integrations, and support tailored to enterprise needs.

GARI

how we increase | save
your margin

CPI:

1–3% net buy-price improvement; hedge variance **-20–40%**.

BUYING
predict cost of inventory

STORING
predict volume to buy

DemandLens:

δ -MAPE **+15–30%**;
Days of Inventory **8–15%**;
service **+1–3pp**.

GARI

Unique AI & machine learning model
(8 years developed & tested)

INVESTMENT STRATEGY
Have a strong data direction

MITIGATING RISK
Prepare for supply risks

StrategyForge: staged investment IRR **+2–5pp**;
decision speed **+4–8 weeks**; consulting spend avoided **€1–3m**.

Supply Risk Radar:
disruption days **-30–50%**;
premium freight **-20–35%**;
buffer optimisation **5–10%**

COMPETITION – THE DIFFERENCE IS 70 – 90% ACCURACY

costly & narrow & time consuming

DIY

Spreadsheets
ChatGPT

- ✓ Affordable
- ✗ Insufficient complexity of data
- ✗ Or not based on data
- ✗ Inaccurate, hallucinates
- ✗ Over time – more costly

Market Research & Consultancies

- ⚙ Focused but narrow
- ✗ Limited in scope & context
- ✗ One-off, problem-specific

Data Platforms

- 👛 Domain credit but siloed
- ✗ Not predictive
- ✗ Rigid, vertical-only
- 💰 Expensive

How deep AI can solve these challenges?

GARI's AI solutions manage **extreme complexity** with **precision** and **speed**

Maintain a dynamic, self-correcting simulation by processing **billions** of data points.

Multilayered AI solutions to **map** relationships among **all inputs** and commodities.

Accounts for **micro, macro** factors, and transborder **flows** simultaneously

Recalculate the **adjust** all relationships daily – as **impacts shift** all the time.
